Project Quick Facts

Jacobs Engineering

14 Month Duration

1,226,592 Workhours

- Turner set all heavy-haul transported equipment: 8 pipe rack modules, 10 process unit modules, 12 lager vessels and compressors.
- Mechanical scope included structural steel erection, setting of all towers, drums, heat exchangers, pumps, compressors, flare stacks and the piping that interconnects them.
- Turner coordinated metal building erection and roofing, portable onsite machining, lead abatement, air conditioning installations and NDE services.
- Turner provided overall corporate safety to Methanex, as well as all contactors onsite
